Address: Xuan Phuong, Ha Noi

CAREER OBJECTIVE

My objective is to become a skilled Backend Developer capable of designing and building stable, scalable, and secure systems. I aim to master Spring Boot, RESTful API development, and modern backend architectures to deliver high-quality products. I am eager to apply my knowledge to real-world projects, contribute to team success, and continuously improve through learning, research, and hands-on experience.

EDUCATION

2022 - 2025	**Hanoi University of Industry (HaUI)** Major: Information Systems GPA: 3.08

SKILLS

Java Spring Boot, Java core	Proficient in project architecture, Dependency Injection, and Service Layer.
MySQL	Design, optimize queries, and manage databases.
Git & Postman	Work with version control systems and test APIs.
RESTful API, JWT Authentication	Design REST APIs and manage secure sessions.
Thymeleaf	Understand and use basic syntax in MVC projects. Familiar with MVC-based development.

PERSONAL PROJECTS

2025 - 2025	**Hotel Booking & Management System** **Full Stack developper** **Java & Spring Boot** – implemented room, booking, customer, service, and invoice modules using a layered architecture. **Spring Security & JWT** – applied secure authentication and role-based authorization for staff and admin. **RESTful API Design** – structured clean API endpoints for reservations, customers, services, and billing. MySQL – designed and optimized tables for rooms, customers, reservations, invoices, and service usage. **Git** – managed commits, branching, and repository organization using Git/GitHub. **Postman** – tested booking flows, service usage, invoice generation, and room availability checking. **React (basic)** – built and integrated frontend pages for login, room listing, and booking, communicating with backend APIs.
2024 - 2025	**GreenBook Store** **Backend Developer**

Java & Spring Boot – built authentication, product, cart, and order services using layered architecture and OOP.
RESTful API Design – designed endpoints for books, categories, users, and orders with proper validation and error handling.
JWT Authentication – secured user login, protected routes, and ensured authorization for each request.
MySQL – created database schema for books, categories, authors, users, and orders; optimized queries for performance.
Git – managed project versions, branches, and team collaboration.
Postman – tested all APIs, handled debugging and request/response validation.

2025 - 2025

Hotel Management System

Backend Developer

Java & Spring Boot – implemented room, booking, customer, service, and invoice modules using layered architecture.
Spring Security & JWT – applied secure authentication and role-based authorization for staff and admin.
RESTful API Design – structured clean API endpoints for reservations, customers, services, and billing.
MySQL – designed and optimized tables for rooms, customers, reservations, invoices, and service usage.
Git – used version control for commits, branching, and project organization.
Postman – tested booking flows, service usage, invoice calculation, and availability checking.
Thymeleaf (basic) – integrated views for some admin-facing pages following the MVC pattern.
